SUMMARY

Software engineer with nine years building and operating backend services, event pipelines, and customer-facing products. Leads practical design decisions, mentors teammates, and follows systems through deployment and on-call support.

EXPERIENCE

Harborline Commerce | Senior Software Engineer | 2023-06

- Designed Kafka retry and dead-letter handling for order events, documenting ordering and delivery guarantees and adding safe replay tools for support engineers.
- Designed Java/Spring Boot payment reconciliation services processing 180,000 daily events; added idempotency keys and replay protection to prevent duplicate ledger entries.
- Instrumented six backend services with OpenTelemetry and Prometheus; created Grafana dashboards and runbooks that reduced median incident diagnosis from 42 to 27 minutes.
- Reduced checkout API p95 latency from 420 to 260 ms by tracing slow PostgreSQL queries, adding targeted indexes, and moving repeated lookups into Redis.
- Led a phased Java service migration with feature flags, canary releases, and rollback rehearsals; moved five services without a customer-visible outage during the migration.
- Mentored two engineers through design reviews and on-call onboarding; introduced short architecture decision records for cross-team API changes.

Pinecrest Freight Systems | Software Engineer II | 2020-03 - 2023-05

- Developed Go/gRPC shipment-tracking services handling 35,000 updates per minute at peak; added backpressure and bounded retries for unreliable carrier feeds.
- Built Kafka ingestion with schema validation and deduplication for 14 carrier feeds; added replayable S3 archives and dashboards for delayed or malformed events.
- Rotated primary on-call for shipment services; investigated queue lag and database saturation, wrote incident reviews, and added actionable SLO-based alerts.
- Introduced REST/gRPC contract tests and synthetic carrier fixtures, catching incompatible payload changes before release across three partner integrations.
- Cut CI feedback from 18 to 7 minutes by separating unit and integration suites and reusing dependency artifacts in GitHub Actions.

EDUCATION

Westbridge University | M.S. | Software Engineering | 2022

Lakeview Institute of Technology | B.S. | Computer Science | 2017

SKILLS

Distributed systems, On-call and SLOs, Kafka, Go, Java, TypeScript, JavaScript, Performance profiling, OpenTelemetry, Prometheus, Grafana, Automated testing, CI/CD, Git, REST APIs, gRPC, PostgreSQL, SQL, Application security, Technical documentation, Mentoring and design reviews, Service architecture, Data pipelines
