SUMMARY

Software engineer with nine years improving service reliability, deployment workflows, and data platforms. Builds maintainable distributed services and tools that help application teams ship and diagnose software.

EXPERIENCE

Harborline Commerce | Senior Software Engineer | 2023-06

- Designed Kafka retry and dead-letter handling for order events, documenting ordering and delivery guarantees and adding safe replay tools for support engineers.
- Led a phased Java service migration with feature flags, canary releases, and rollback rehearsals; moved five services without a customer-visible outage during the migration.
- Designed Java/Spring Boot payment reconciliation services processing 180,000 daily events; added idempotency keys and replay protection to prevent duplicate ledger entries.
- Instrumented six backend services with OpenTelemetry and Prometheus; created Grafana dashboards and runbooks that reduced median incident diagnosis from 42 to 27 minutes.
- Mentored two engineers through design reviews and on-call onboarding; introduced short architecture decision records for cross-team API changes.

Pinecrest Freight Systems | Software Engineer II | 2020-03 - 2023-05

- Developed Go/gRPC shipment-tracking services handling 35,000 updates per minute at peak; added backpressure and bounded retries for unreliable carrier feeds.
- Rotated primary on-call for shipment services; investigated queue lag and database saturation, wrote incident reviews, and added actionable SLO-based alerts.
- Containerized four services with Docker and deployed them to Kubernetes using Terraform-managed AWS infrastructure; documented resource limits and deployment recovery.
- Built Kafka ingestion with schema validation and deduplication for 14 carrier feeds; added replayable S3 archives and dashboards for delayed or malformed events.
- Introduced REST/gRPC contract tests and synthetic carrier fixtures, catching incompatible payload changes before release across three partner integrations.

IBM | Software Engineer | 2018-01 - 2020-02

- Added JUnit integration tests and API regression checks to Jenkins builds; reproduced and fixed race conditions in concurrent update flows.

EDUCATION

Westbridge University | M.S. | Software Engineering | 2022

Lakeview Institute of Technology | B.S. | Computer Science | 2017

SKILLS

Distributed systems, On-call and SLOs, Kubernetes, gRPC, Kafka, OpenTelemetry, Prometheus, Grafana, Automated testing, CI/CD, Service architecture, Technical documentation, Mentoring and design reviews, Cross-functional delivery, Go, Java, AWS, Terraform, Docker, Performance profiling, Python, LLM integration
